

The L^AT_EX metalogox package

v1.00 — 2019/01/20

© 2019 Brian Dunn
bd@BDTechConcepts.com

Automatically adjusts the T_EX logo and related, depending on the font.

Font	Default	metalogox
Latin Modern	L ^A T _E X 2 _ε	L ^A T _E X 2 _ε
Erewhon	L ^A T _E X 2 _ε	L ^A T _E X 2 _ε
Libre Caslon	L ^A T _E X 2 _ε	L ^A T _E X 2 _ε
IM Fell English	L ^A T _E X 2 _ε	L ^A T _E X 2 _ε
Coelacanth	L ^A T _E X 2 _ε	L ^A T _E X 2 _ε
Alegreya	L ^A T _E X 2 _ε	L ^A T _E X 2 _ε
Helvetica	L ^A T _E X 2 _ε	L ^A T _E X 2 _ε
Antiqua	L ^A T _E X 2 _ε	L ^A T _E X 2 _ε

Abstract

The metalogox package extends the metalogo package to automatically adjust the appearance of the logos T_EX, L^AT_EX, L^AT_EX 2_ε, X_EL^AT_EX, and LuaL^AT_EX, depending on the font detected or the option given to metalogox.

Most of the serif and sans fonts listed at [The L^AT_EX Font Catalogue](#) are supported.

1 Introduction

The rendering of the logos \TeX , \LaTeX , $\text{\LATEX}_2\epsilon$, \XELATEX , \XETEX , and \LuaLATEX depends on the font, and in some cases the appearance of these logos may be improved with some minor adjustments of the positions of each of the elements. The `metalogox` package, by ANDREW GILBERT MOSCHOU, allows the user to specify these adjustments, but it is left to the user to determine the values to use. The correct value may depend on the font size, but in most cases predefined settings may be used.

The `metalogox` package assigns these settings for `metalogox`. The default is for `LATIN MODERN` and similar. If the font in use is supported by `metalogox`, settings for that font are automatically assigned, overriding the `LATIN MODERN` default. If the user specifies a package option, its settings override the default and also anything set by font detection.

2 Using the `metalogox` package

`Pkg metalogox` In most cases, it is sufficient to simply load the `metalogox` package after the fonts have been selected:

```
\usepackage{<font packages>}
\setmainfont{Font Name}                                (if using fontspec)
... etc ...
% \renewcommand{\familydefault}{\sfdefault}           (optional)
...
\usepackage{metalogox}
```

Many fonts are supported by `metalogox`, and if one of these is in use then the appropriate settings are assigned automatically, according to the default text body font: $\text{\LATEX}_2\epsilon$

`options` If several font packages are used, or a font is not recognized, it may be necessary to specify a `metalogox` package option, which overrides the font detection:

```
\usepackage[baskerville]{metalogox}
```

`\adjustlogos {<package option>}`

`\adjustlogos` may be used to adjust the logos for an unknown font. The mandatory argument is the same as the package options. This is a local change, and may be adjusted as needed.

```
\Fontskrivan                                         (from the aurical package)
\adjustlogos{default} \LaTeXe
\adjustlogos{baskerville} \LaTeXe
```

$\text{\LATEX}_2\epsilon$
 $\text{\XELATEX}_2\epsilon$

\autoadjustlogos \autoadjustlogos may be used to make local changes according to the current font:

\textsf{Using \autoadjustlogos\LaTeXe}	Using L ^A T _E X 2 _{<}
\textsf{Using \textrm{\autoadjustlogos\LaTeXe}}}	Using L ^A T _E X 2 _{>}

\autoadjustlogos* The starred form, \autoadjustlogos*, is used by **metalogox** at the beginning of the document to set according to the default text body font.

Notes:

- **metalogox** option names may be found in the following pages, or in the index.
- **metalogox** options are always lowercase, even if a related package name may have uppercase letters.
- Many options, such as `times`, are used to cover an entire category of related fonts.
- Other options, such as `baskerville`, may be used for unrelated fonts which just happen to work well with the same logo settings.
- For some fonts, X_EL^AT_EX renders the reversed E in the X_EL^AT_EX logo differently than pdfl^AT_EX and LuaL^AT_EX.
- There are sometimes differences between the TYPE1 and the OTF / TTF fonts.
- PDF display software may not render logos well on the screen at small display sizes. Zoom in to judge the quality of the logos.
- The **metalogox** parameters were set according to the design preferences of the author of the **metalogox** package. Some may disagree with the design choices which were made, but the results are probably better than the defaults, and the user may take control using the **metalogox** package directly.
- Since the same settings are usually shared by many fonts, some logos may not be perfect.

3 Code

3.1 Required packages

```

1 \RequirePackage{metalogo}
2
3 \RequirePackage{xparse}
4
5 \RequirePackage{etoolbox}
```

3.2 Package options

Each of the following is a macro which is activated by passing the option of the same name to `metalogox`, or by calling `\adjustlogos`.

For example, either of the following sets the default `metalogo` logo adjustments:

```
\usepackage[default]{metalogox}
— or —
\adjustlogos{default}
```

Opt `default` The L^AT_EX and `metalogo` default settings.

```

6 \newcommand*{\MLX@default}{%
7   \setlogokern{Te}{-.1667em}%
8   \setlogokern{eX}{-.125em}%

3.2.1 Common synonyms

Synonyms for commonly-used fonts.

Opt tgbonum

```
426 \newcommand*{\MLX@tgbonum}{\MLX@bookman}
```

Opt tgheros

```
427 \newcommand*{\MLX@tgheros}{\MLX@helvetica}
```

Opt tgpagella

```
428 \newcommand*{\MLX@tgpagella}{\MLX@palatino}
```

Opt tgschola

```
429 \newcommand*{\MLX@tgschola}{\MLX@newcent}
```

Opt tgtermes

```
430 \newcommand*{\MLX@tgtermes}{\MLX@times}
```

3.2.2 Similar fonts

The following work well enough that a separate definition is probably not necessary.

Opt `antiqua`

```
431 \newcommand*{\MLX@antiqua}{\MLX@baskerville}
```

Opt `anttor`

```
432 \newcommand*{\MLX@anttor}{\MLX@antpol}
```

Opt `artemisia`

```
433 \newcommand*{\MLX@artemisia}{\MLX@baskerville}
```

Opt `caladea`

```
434 \newcommand*{\MLX@caladea}{\MLX@baskerville}
```

Opt `caslon`

```
435 \newcommand*{\MLX@caslon}{\MLX@baskerville}
```

Opt `cochineal`

```
436 \newcommand*{\MLX@cochineal}{\MLX@baskerville}
```

Opt `concmath`

```
437 \newcommand*{\MLX@concmath}{\MLX@lmodern}
```

Opt `drm`

```
438 \newcommand*{\MLX@drm}{\MLX@lmodern}
```

Opt `garamond`

```
439 \newcommand*{\MLX@garamond}{\MLX@baskerville}
```

Opt `imfellenglish`

```
440 \newcommand*{\MLX@imfellenglish}{\MLX@baskerville}
```

```

Opt literat
 441 \newcommand*{\MLX@literat}{\MLX@baskerville}

Opt roboto
 442 \newcommand*{\MLX@roboto}{\MLX@pandora}

Opt romande
 443 \newcommand*{\MLX@romande}{\MLX@baskerville}

```

3.3 Manual adjust selection

\adjustlogos {*package option*}

If the given option matches a predefined \MLX@... macro, use it.

```

444 \newcommand*{\adjustlogos}[1]{%
445   \ifcsdef{MLX@#1}{%
446     \PackageInfo{metalogox}{Setting #1}%
447     \csuse{MLX@#1}%
448   }{%
449     \PackageError{metalogox}{Unknown setting #1}%
450     {See the metalogox documentation for a list of options.}%
451   }%
452 }

```

3.4 Font detection

\MLX@@detectvariant {*1: family*} {*2: variant*} {*3: name*} {*4: setting*}

If the font variant matches, adjust accordingly.

(The doubled @ is to distinguish this from a valid metalogox option.)

```

453 \newcommand*{\MLX@@detectvariant}[4]{%
454 \ifdefstring{\MLX@thisfont}{#1#2}{%
455   \PackageInfo{metalogox}{Detected #1#2, #3. Using #4}%
456   \adjustlogos{#4}%
457 }{%
458 }

```

```
\MLX@@detectone {⟨1:family⟩} {⟨2:name⟩} {⟨3:setting⟩}
```

Tests variants. If a font family and variant matches, select the **metalogox** option.

(The doubled @ is to distinguish this from a valid **metalogox** option.)

```
459 \NewDocumentCommand{\MLX@@detectone}{m m m}{%
460 \MLX@@detectvariant{#1}{}{#2}{#3}%
461 \MLX@@detectvariant{#1}{-TLF}{#2}{#3}%
462 \MLX@@detectvariant{#1}{-LF}{#2}{#3}%
463 \MLX@@detectvariant{#1}{-OsF}{#2}{#3}%
464 \MLX@@detectvariant{#1}{-T0sF}{#2}{#3}%
465 \MLX@@detectvariant{#1}{Condensed-TLF}{#2}{#3}%
466 \MLX@@detectvariant{#1}{Condensed-LF}{#2}{#3}%
467 \MLX@@detectvariant{#1}{Condensed-OsF}{#2}{#3}%
468 \MLX@@detectvariant{#1}{Condensed-T0sF}{#2}{#3}%
469 \MLX@@detectvariant{#1}{(0)}{#2}{#3}%
470 }
```

\autoadjustlogos Search a list of fonts and variants, looking for a match with the current one.

```
471 \NewDocumentCommand{\autoadjustlogos}{s}{%
```

If starred, use the text body font, else use the local font:

```
472 \IfBooleanTF{#1}{%
473     \edef\MLX@@thisfont{\familydefault}%
474 }{%
475     \edef\MLX@@thisfont{\f@family}%
476 }
```

Announce the desired font:

```
477 \PackageInfo{metalogox}{Searching for \MLX@@thisfont}%
```

Default if nothing is found:

```
478 \adjustlogos{lmodern}%
```

Search a list of possibilities:

```

```

3.5 Option declaration

```
743 \DeclareOption*{%
744     \adjustlogos{\CurrentOption}%
745 }
```

3.6 Default settings

Adjust according to the text body font, if detected, or use defaults otherwise:

```
746 \autoadjustlogos*
```

3.7 Option trigger

Any metalogox package option will next override the above settings.

```
747 \ProcessOptions\relax
```

Change History

v1.00

General: 2019/01/20 Initial version. . 1

Index

Numbers written in italic refer to the page where the corresponding entry is described.
Square brackets indicate the option used by a given package or synonym option.
