

The `unitipa` package

Niranjan

Version 0.1 — 2020/21/09

 <https://ctan.org/pkg/unitipa>
 <https://gitlab.com/niranjanvikastambe/unitipa>

This package converts Unicode characters into TIPA commands, which gives us `tipa` typefaces, without actually learning the `tipa` commands in much details. This package needs Lua \LaTeX as the compiler for correctly typesetting the IPA diacritics. TIPA was designed to match with the Computer Modern design, no other IPA font matches with traditional \LaTeX font. This package is helpful for getting the beautiful `tipa` shapes with Unicode characters. This package assumes that the user knows how to type IPA Unicode. Following is the list of symbols that *cannot* be used with the traditional \LaTeX font. Every other symbol in the IPA chart is present in the current \LaTeX font.

Plosives ʈ ɖ ʄ ɠ ʔ

Nasals ŋ ŋ̥ ɳ

Trills ʙ ʀ

Taps or flaps ʋ ɾ ɽ

Fricatives ɸ β θ ʃ ʒ ʂ ʐ ɣ ʁ ʕ ʡ ɦ

Lateral fricatives ɬ ɮ

Approximants ʋ ɹ ɻ ɰ

Lateral approximants ɭ ʎ ʟ

Affricates ʧ ʤ ts ɖ

Close vowels i ɨ u

Near-close vowels ɪ ʏ ʊ

Close-mid vowels ɘ ɤ

Open-mid vowels ɛ ɜ ɞ ʌ ɔ

Near-open vowels ɐ ɶ ɓ

Clicks ǀ ǁ ǂ ǃ

Voiced Implosives ɓ ɗ ɟ ɠ

1 Package options

nodiacritics

If you are very sure that you don't need any IPA diacritics in your document, you can load the package with this option. If this option is loaded, package can be compiled with other compilers too, but no IPA diacritic will be printed.

ipafont

`ipafont=`

IPA character [v] is not available in `tipa`, but for the convenience of users, this character is coded with Doulos SIL as it seemed to me the closest match to `tipa` typeface. If you don't have this font, please install package [doulosil](#) or download the font from [here](#). If users want to change the font used for this character, they can simply add the font name as the value to this option.
